The articles below were selected by a group of Canada FASD Research Network (CanFASD) staff, researchers, and Family Advisory Committee members to highlight some of the work that has been published over the last year in the field of FASD.

A search of Web of Science, PubMed, and PsycInfo databases yielded over 230 articles published in 2016. Many of these were excellent publications (especially in the areas of animal models of FASD, epigenetics, and brain-based research), however the final list was narrowed down to focus on CanFASD’s areas of emphasis in FASD prevention, intervention, diagnosis, social justice, child welfare, and family collaboration. Additional consideration for what constituted the “top” articles included:

- Generalizability to Canadians
- Influence on practice or policy
- Novelty
- Scientific rigour
- Media attention

Final selections were categorized by area of focus, and limited to 10 articles or less per category. All articles are published in peer-reviewed journals. They are arranged in alphabetical order by first author’s surname, and those in **bold** are available in open access.
